5.4 THE MOST CURRENT VERSION OF THE ADDITIONAL TERMS

EPIC Software	Module Details
Patient Access	
Prelude Enterprise Registration	Is an enterprise-wide registration and patient tracking system promoting accurate registrations and giving staff the tools needed to manage patient registration and demographic information which includes Real Time Eligibility.
Cadence Enterprise Scheduling	Makes it easy for users to schedule visits and procedures while providing tools that help improve patient services, keep appropriate slots open, and make efficient use of staff and other resources.
MyChart/Shared Patient Record (patient portal)	Provides a direct portal to patients a direct portal to their medical data and interact with their physicians over the internet.
Core Clinicals and Medical Records	
EpicCare Ambulatory EMR	Supports primary care providers and specialists in outpatient environments. Intuitive search, chart review, order entry, flexible documentation options, integrated specialty support, and fast decision support combine in a secure system with a reputation for physician acceptance.
Care Everywhere (sharing records between health systems)	Sharing records between health systems, helps ensure patients' medical data can follow them wherever they go – gathering information from all sources into a single patient story. Organizations on the network share clinical information, including results histories and encounter summaries, when patients cross organizational boundaries.
Health Information Management (HIM)	Provides tools to simplify your medical records management tasks in your office. Release of information tools allows your staff to efficiently package records for ROI requests. Open encounter reports and billing reports allow your office manager or physician leadership confirmation documentation is being completed and billed, along with the ability to do internal auditing for proper billing based on documentation.
Mobile	
Haiku (Epic for smartphones)*	Epic's application for the iPhone, iPod touch, and Android smartphones enables providers to access their schedules, patients' clinical information, In Basket result notifications and staff messages on mobile devices.
Canto (Epic for iPad)*	Epic's application for the iPad enables providers to access their schedules, patients' clinical information, In Basket result notifications and staff message on mobile devices.
*Mobile Devices	Smartphones and iPad devices will need to be purchased separately by participating practices.

Enterprise Intelligence	
Healthy Planet	Is an EHR-agnostic, integrated population health platform designed to help you identify, treat, and engage high-risk and high-cost populations of patients. Aggregating data from nearly any outside source, the system lets you see how well you are doing and then execute the changes needed to help patients do even better – will extend existing Healthy Planet reporting dashboards as part of Community Connect offering
